JWP-AP300 Aqua Pro Submersible Pump/Tank Assembly

Now available from Jan Watercraft Products is a 12V submersible pump inside of a 5 gallon molded container. The pump is controlled with a toggle switch that can be powered by a 120 VAC transformer or a 12V female coupler with alligator clip attached to a standard 12V battery. Either way you can conveniently add water to multiple battery system. Press the gray button to disconnect the pump/tank from the batteries and continue to the next battery bank. It's that simple!

In addition this kit also includes a flow indicator with tumbling red balls that signals when water is flowing into the batteries. The red balls will become motionless when watering is complete.

When this is used with a battery water kit you can easily fill up to 8 batteries in just a couple of minute to the precise battery full level. The flow-indicator is designed specifically to connect to the FLOW-RITE male connector.

Please contact us for more information.
